Date of Report: 9/15/2023

SOUTH FORK COMPLEX BURNED AREA REPORT

PART I - TYPE OF REQUEST

A. Type of Report

- \boxtimes 1. Funding request for estimated emergency stabilization funds
- ☐ 2. No Treatment Recommendation

B. Type of Action

- ☑ 1. Initial Request (Best estimate of funds needed to complete eligible stabilization measures)
- ☐ 2. Interim Request #____
 - ☐ Updating the initial funding request based on more accurate site data or design analysis

PART II - BURNED-AREA DESCRIPTION

A. Fire Name: South Fork Complex B. Fire Number: CA-SHF-001004

C. State: CA D. County: Trinity

E. Region: 05 F. Forests: SHF and SRF

G. District: SFMU and MRMU H. Fire Incident Job Code: P5QJ7W & P5QKY1

I. Date Fire Started: 8/18/2023 J. Date Fire Contained: 90%

K. Suppression Cost: \$34,500,000

L. Fire Suppression Damages Repaired with Suppression Funds (estimates): 56 miles.

1. Fireline repaired (miles):

2. Other (identify):

M. Watershed Numbers:

Table 1: Acres Burned by Watershed

| HUC# | Watershed Name | Total Acres | Acres Burned | % of Watershed Burned |
|------------|------------------|-------------|--------------|--------------------------|
| 1801010203 | Middle Mad | 56,504 | 2,759 | 5 |
| 1801021205 | Lower South Fork | 129,206 | 1,170 | 1 |
| | | | | |
| | | | | |
| | | | | |

N. Total Acres Burned:

Table 2: Total Acres Burned by Ownership (as of 60% containment)

| OWNERSHIP | ACRES |
|---------------------|--------------------------|
| NFS | 2817(SRF 2,600; SHF 217) |
| OTHER FEDERAL (LIST | |
| AGENCY AND ACRES) | |
| STATE | 110 |
| PRIVATE | 1,002 |
| TOTAL | 3,929 |

- O. Vegetation Types: Mixed conifer lower slopes with dead white and red fir above (see cover pic)
- P. Dominant Soils: Neuns, Marpa, Holland, and Hugo that are loams and gravelly loams
- Q. Geologic Types: sedimentary, metasedimentary, and schist mélange.
- R. Miles of Stream Channels by Order or Class:

Table 3: Miles of Stream Channels by Order or Class

| | · · · · · · · · · · · · · · · · · · · | | | | | | | | |
|--------------|---------------------------------------|--|--|--|--|--|--|--|--|
| STREAM TYPE | MILES OF STREAM | | | | | | | | |
| PERENNIAL | 1.5 | | | | | | | | |
| INTERMITTENT | 5 | | | | | | | | |
| EPHEMERAL | 4 | | | | | | | | |
| OTHER | | | | | | | | | |
| (DEFINE) | | | | | | | | | |

S. Transportation System:

Trails: National Forest (miles): 4 Other (miles): Roads: National Forest (miles): 30 Other (miles): 15

PART III - WATERSHED CONDITION

A. Burn Severity Map and Acres):

South Fork Complex Soil Burn Severity

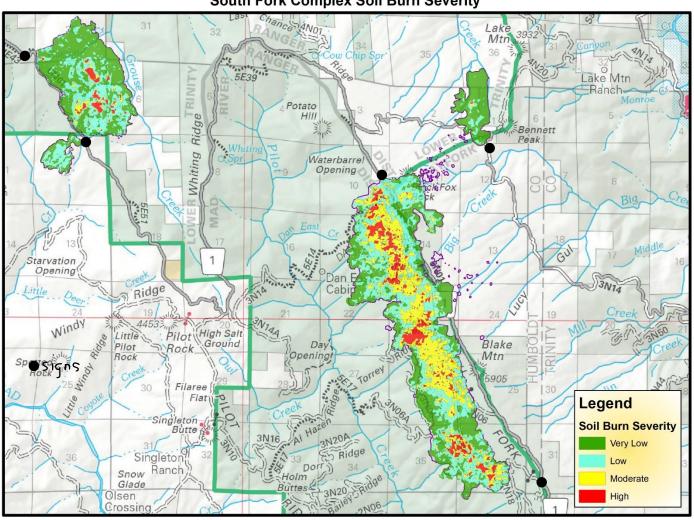

Table 4: Burn Severity Acres by Ownership

| Soil Burn Severity | NFS | Other Federal (List Agency) | State | Private | Total | % within the Fire Perimeter |
|-----------------------|------|-----------------------------|-------|---------|-------|--------------------------------|
| Unburn/v-low | 990 | | | 598 | | 40 |
| Low | 1230 | | 113 | | | 32 |
| Moderate | 758 | | | 5 | | 21 |
| High | 225 | | | 10 | | 6 |
| Total | 3203 | | 113 | 613 | | |

B. Water-Repellent Soil (acres): 30%

C. Soil Erosion Hazard Rating: moderate to high

D. Erosion Potential: 2 to 5 t/a for a 2-year storm

- E. Sediment Potential: 40%
- F. Estimated Vegetative Recovery Period (years): 5 years.

G. Estimated Hydrologic Response (brief description): Rapid runoff from high soil-burn severity areas could impact Pilot creek causing increased flows with heavy laden silt and sands muddying up Pilot creek into the Mad River and into Grouse creek that feeds into the South Fork of the Trinity River.

PART V - SUMMARY OF ANALYSIS

Introduction/Background: These fires started from the lightning that moved through northern California earlier this week. The South Fork Complex includes the 3-9, Sulfur, Pellitreau fire and the Pilot Fire. 3-9 Fire: 2,840 acres with 90% containment; Pellitreau Fire: 3 acres with 100% containment; Pilot Fire: 1,055 acres with 100% containment; Sulphur Fire: 31 acres with 100% containment for a total of 3,929 acres and 90% overall containment for the South Fork Complex. The 3-9 fire is a reburn of the 2015 Route complex (see cover pic).

Describe Critical Values/Resources and Threats (narrative):

Table 5: Critical Value Matrix

| Probability of | Magnitude of Consequences | | | | | | | | |
|----------------|---------------------------|--------------|----------|--|--|--|--|--|--|
| Damage or Loss | Major Moderate Minor | | | | | | | | |
| | RISK | | | | | | | | |
| Very Likely | Very High | Very High | Low | | | | | | |
| Likely | Very High | High | Low | | | | | | |
| Possible | High | Intermediate | Low | | | | | | |
| Unlikely | Intermediate | Low | Very Low | | | | | | |

- 1. Human Life and Safety (HLS): Possible/Minor = Low, (Carson Creek crossing have possible damage due to high soil burn severity above with the consequences as minor of low traffic on these roads during storms with the crossing at Carson Creek being compromised).
- 2. Property (P):Roads: Likely/Moderate = High, (SRF 3N06 and 3N33 crossings and Carson Creek crossings have possible damage due to moderate soil burn severity above plugging culverts and overtopping causing roadfill washouts).
- **3. Natural Resources (NR):** T&E Native Plants: Likely/Moderate = High, (noxious weed populations exist near contingency lines and unwashed suppression equipment used to create dozer-lines see Appendix B).
- **4.** Cultural and Heritage Resources: Unlikely/Minor = Very Low, (some sites are burned over that were already burned over amd destroyed by previous Route Complex in 2015).
- **A. Emergency Treatment Objectives:** Control the spread of noxious weeds through EDRR, road storm proofing, and public safety through posting hazards warning signs on roads (see soil burn map for locations).
- B. Probability of Completing Treatment Prior to Damaging Storm or Event:

Land: 85% Channel:

Roads/Trails: 80% Protection/Safety: 95%

D. Probability of Treatment Success

Table 6: Probability of Treatment Success

| | 1 year after treatment | 3 years after treatment | 5 years after treatment |
|-------------------|---------------------------|----------------------------|-------------------------|
| Land | 90 | 80 | 70 |
| Channel | | | |
| Roads/Trails | 85 | 75 | 70 |
| Protection/Safety | 95 | 90 | 85 |

- E. Cost of No-Action (Including Loss): \$ 1,625,000 (see Appendix C Cost/Benefit Analysis Spreadsheet)
- F. Cost of Selected Alternative (Including Loss): \$77100

H. Treatment Narrative:

Land Treatments: EDRR for dozer lines, drop points, and staging areas. 22 miles of dozer lines and 13 miles of roads used fire-lines. 3 acres of safety zones, drop points, staging areas, and heli-spots. BAR noxious weeds funding for 2 and 3rd years will be requested (see Appendix A - Repair Map).

EDRR cost per mile is \$1,000 mile X 50 miles = \$50,000 contingency lines and dozer lines. EDRR cost per acre is \$1,700 acre X 3 acres = \$5,100 for staging, drop points, safety zones.

Channel Treatments: none

Roads and Trail Treatments: storm-proofing, roads will experience dry ravel will need clearing after storms and several years afterward, will apply for BAR road funding. Large area of low burn severity will disperse sediments coming off moderate burn severity above except road crossings at road 4N20 in section 1, along 3N06, 3N33 and Carson Creek Road all on the Six-Rivers N.F. that have high burn severity above, these areas will have increased flows and sediments coming down on these road crossings. Culvert clean-out, road fill burn-out repair, and rolling dips will be needed to mitigate sediments coming down on these roads.

Protection/Safety Treatments: BAER warning signs (5 ea) along Berry Summit Road, Kerlin Creek Road at the beginning of fire and at end of fire (see Soil Burn Severity Map for locations for signs).

BAER warning sign with installation \$500 each X 5 signs = \$2,500.

I. Monitoring Narrative:

none

Appendix A: Repair Map – Depicting potential high risk weed infestation areas

Appendix B: Weed List

Avoid impacts to areas with Canada thistle (CIAR4), star thistle (CESO3), Armenian blackberry (RUDI2) and most importantly the Diffuse Knapweed (CEDI3). The last 3 are noxious weeds and will need to be documented for READ and BAER efforts. The rest are lower priority weeds and fungi less priority to mitigate impact from fire suppression activities. The HYPE or St. Johns wort has stuck to disturbed areas and doing well with biocontrol beetles release in the late 90s.
